Define the Problem Statements

Date	28 June 2026
Roll no	23A51A1259
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	2 Marks

Customer Problem Statement:

Metro passengers often experience inconvenience while booking tickets due to long queues at ticket counters, manual fare calculation, and delays in ticket issuance. Daily commuters require a fast, reliable, and user- friendly ticket booking system that allows them to book tickets from anywhere without waiting. The absence of an automated digital ticketing system reduces operational efficiency and affects the overall travel experience.

To address these challenges, the Metro Ticket Generating System in ServiceNow provides a digital platform that enables passengers to book metro tickets online by selecting the source and destination stations. The system automatically calculates the fare, generates a unique QR- code- based digital ticket, stores booking details securely, and sends instant booking notifications. This solution minimizes manual effort, reduces waiting time, improves accuracy, and enhances the overall passenger experience by offering a seamless, secure, and efficient metro ticket booking process.

Aspect	Description in context of our project
 I am	 We are ServiceNow developers and IT automation enthusiasts working on building a Metro Ticket Generating System.
 I'm trying to	 Digitize the metro ticket booking process by allowing users to search routes, select travel details, and generate digital tickets with QR codes.
 But	 Currently, the process is manual and time-consuming, causing long queues, booking errors, and limited visibility.
 because	 Ticket bookings are handled manually at counters or through offline methods without automation, proper tracking, or real-time updates.
 which makes	 The solution valuable by providing fast ticket booking, instant QR code generation, accurate fare calculation, better transparency, and higher user satisfaction.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS- 1	A metro passenger	Book a metro ticket quickly and receive it instantly.	The ticket booking process is slow and requires waiting in long queues.	Tickets are issued manually, and there is no automated digital booking system.	Frustrated due to delays and inconvenience during travel.
PS- 2	A metro station administrator	Manage ticket bookings and generate digital tickets efficiently.	Handling ticket requests, fare calculations, and ticket generation manually is time-consuming.	There is no automated workflow to process bookings, calculate fares, and generate QR- code-based tickets.	Overloaded and concerned about providing fast and efficient passenger service.
