

Project Design Phase Proposed Solution Template

Date	28 June 2026
Name	Tamminana Harshitha
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	2 Marks

Proposed Solution

The LM Metro Ticket Generating System in ServiceNow automates metro ticket booking through a self- service portal. Users can select source and destination stations, enter travel details, and generate digital tickets with QR codes. The system automatically calculates fares, creates booking records, and sends notifications, providing a fast and seamless ticketing experience.

Objectives

- Automate metro ticket booking and generation.
- Reduce waiting time at ticket counters.
- Improve ticket management and tracking.
- Enhance passenger convenience and satisfaction.

Key Features

- Service Catalog for ticket booking.
- Automated fare calculation.
- QR code ticket generation.
- Email notifications and ticket tracking.

Expected Benefits

- Faster ticket booking process.
- Improved operational efficiency.
- Reduced manual errors.
- Better passenger experience.

PROPOSED SOLUTION TEMPLATE

Project Title : _____

Date : _____

Prepared By : _____

Version : _____

1. SOLUTION OVERVIEW

The LM Metro Ticket Generating System in ServiceNow automates metro ticket booking through a self-service portal. Users can select source and destination stations, enter travel details, and generate digital tickets with QR codes. The system automatically calculates fares, creates booking records, and sends notifications, providing a fast and seamless ticketing experience.

2. OBJECTIVES

- Automate metro ticket booking and generation.
- Reduce manual work and delays.
- Improve request tracking and visibility.
- Enhance user satisfaction through digital experience.
- Ensure accurate fare calculation and ticketing.

3. TARGET USERS / STAKEHOLDERS

- Metro commuters and travelers
- Service Desk Agents
- Operations Team
- IT Administrators
- Metro Management

4. PROPOSED SOLUTION DESCRIPTION

The LM Metro Ticket Generating System in ServiceNow provides a digital platform for metro ticket booking. Users select stations and travel details from the Service Catalog. The system calculates fare, generates QR code tickets, creates booking records, and sends email notifications. It ensures a seamless, fast, and automated ticketing experience with real-time tracking.

5. KEY FEATURES / FUNCTIONALITIES

- Service Catalog for ticket booking
- Automated fare calculation
- QR code ticket generation
- Flow Designer automation
- Email notifications
- Ticket booking and status tracking

6. SOLUTION ARCHITECTURE

High-level architecture of the solution.

7. IMPLEMENTATION APPROACH

Outline the approach and steps to implement the proposed solution.

Phase	Activity / Task	Description	Deliverable	Timeline
1. Planning	Requirement Analysis	Gather requirements and define scope	Requirement Document	Week 1
2. Design	Solution Design	Design workflows, data model, and catalog	Design Document	Week 2
3. Development	Build & Configuration	Configure ServiceNow components and automation	Configured Solution	Week 3 – Week 4
4. Testing	Testing & Validation	Test all features and workflows	Test Report	Week 5
5. Deployment	Go Live	Deploy solution to production	Live Solution	Week 6
6. Support	Post Implementation Support	Provide user support and improvements	Support Report	Ongoing

8. EXPECTED BENEFITS

- Faster ticket booking and QR generation
- Improved operational efficiency
- Better transparency and tracking
- Reduced manual errors
- Enhanced SLA compliance and customer satisfaction
