

Project Design Phase Solution Architecture

Date	28 June 2026
Name	Tamminana Harshitha
Project Name	Metro Ticket Generating System in ServiceNow
Maximum Marks	4 Marks

Solution Architecture:

The Metro Ticket Generating System is built on the ServiceNow platform using Service Catalog, Flow Designer, Notifications, and a Metro Ticket Database. Users book tickets through a self-service portal by selecting source and destination stations and entering travel details. The system automatically calculates the fare, generates a QR code ticket, creates a booking record, and sends email notifications to the user. All ticket details and booking information are stored and updated in the database, enabling real-time tracking, efficient ticket management, and a seamless metro travel experience.
